

InVade™ bio foam™ **Hot Spot™**

**Microbial/Citrus Foam in an
easy-to-use 16 oz aerosol can**

InVade™ Bio Faom™ Hot Spot™

The single most effective tool the PMP can use to manage fruit, drain and phorid flies in commercial accounts is now available in a 16 oz aerosol can. Apply Hot Spot to cracks, crevices, or anywhere scum accumulates and creates fruit fly breeding “hot spots.” The foam and citrus combination attacks the scum and, over time, the premium blend of microbes will digest the bio film to help prevent further breeding in those areas. A 360 degree nozzle allows you to easily apply Hot Spot even in hard-to-reach areas. The foam provides a longer contact time, nicely coating scummy

areas such as drain covers. Hot Spot is so easy to use, it also makes a great add on sale. Since Hot Spot is essentially addressing sanitation issues, regular use will help in managing cockroach infestations as well. InVade Bio Foam Hot Spot should not be applied on top of bait placements.
