Shatter™

EPA Reg. No. 62719-272

Requirements for Termite Stations Baited with Shatter™ Installed at New Structures

(For Distribution and Use Only in the State of Florida)

ATTENTION

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- This supplemental labeling provides monitoring requirements for termite stations baited with Shatter™ termite bait during the year following installation of the termite baiting system at new structures in the state of Florida.
- Before using Shatter according to this supplemental labeling, read and understand the entire label. Carefully follow all precautionary statements and applicable use directions.

In Florida, Shatter™ termite bait may be installed for protection of new structures in lieu of a preconstruction termiticide treatment. During the year following installation of the termite baiting system, termite stations baited with Shatter must be inspected monthly. Thereafter, baited termite stations may be inspected as specified in the "Monitoring" section of the label booklet for Shatter. In addition, during the year following installation of the termite baiting system, each termite station initially baited with Shatter must have at least one auxiliary termite station, baited with Shatter, installed within 12 inches if suitable ground access exists. Additional auxiliary stations may contain monitoring devices and/or Shatter. Thereafter, auxiliary stations may be used as specified in the "Installation of Bait Cartridges Containing Shatter" and "Installation of Auxiliary Stations" sections of the label booklet for Shatter.

Note: These preconstruction treatment instructions supercede prior instructions restricting the use of Shatter in lieu of a pre-construction termiticide (chemical barrier) treatment in the state of Florida.
